*On Hysteria.*

## Of Hysteria.

For the history of the symptoms of this Disease, I refer you to <sup>Dr Rich<sup>d</sup>: Blackmore</sup> Dr Sydenham, and Dr Cullen who have described them not only correctly, but with elegance. It is an epitome, or condensation of all disease.

I shall briefly enumerate some of its most striking peculiarities and symptoms.

1 It is seated primarily in the nerves, muscles, alimentary canal, but rarely affects the blood vessels. In this respect only it differs from the Gout which affects the blood vessels with all those parts of the body which are affected by Hysteria, or perhaps it is more proper to say it is Gout in the form of muslin or tiffany instead of broad cloaths, for it is brought on by the operation of most of the

V the cessation of the menses, but I have  
never ~~since~~ seen it in two sisters, the  
one but two, and the other but six years  
old. It is remarkable ~~its effects~~ were an  
apparently robust constitution does not  
protect women from it.

#3 The Hysteria appears in a chronic form without  
intermissions

4 It appears in paroxysms with a perfect freedom  
from all its symptoms in its intervals.

The paroxysms are more severe in this  
case than when they are followed by the  
chronic form of the disease.

Causes that induce Gout acting only upon  
the nervous, muscular & alimentary predispo-  
sitions. ~~When it affects the blood vessels, & the lungs~~  
- It is the first settlement of new ma-  
terial "hypertrophied"  
- I find it was common to ascribe all anomalous  
diseases to witchcraft. ~~In modern times all~~  
~~such diseases are ascribed~~  
~~to the Gout~~

2 It affects women more than men, ~~in the~~  
~~progression of the disease~~ and that in con-  
-sequences of the nerves, muscles & alimentary  
canal possessing more <sup>in women</sup> predisposition to be acted  
upon by irritants than the same parts in  
men. It appears chiefly between puberty, and

3 It appears in <sup>paroxysms, and with chronic</sup> ~~a chronic form without~~  
symptoms in its intervals. †  
~~paroxysms~~

4 It appears in paroxysms and with  
chronic symptoms in its intervals.

5 It appears in paroxysms, with a perfect

✓ likewise in appearing in paroxysms,  
+ in imperfect and perfect intermissions.

freedom from all its symptoms in its inter-  
~~The paroxysms in this case are more severe~~  
~~=vals. In this case the~~  
~~than when they are followed by chronic symptoms~~

You will perceive here a striking illus-  
 =tration of the Unity or Sameness of disease in  
 two different Systems. The Hysteria you see  
 conforms exactly to the fever in being accom-  
 =panied with paroxysms, remissions only,  
 and intermissions. It avoids with the gout

~~The~~ The mind under all the forms of Hysteria  
 that have been described is capricious, and  
 fickle and that to such a degree (to use the  
 words of Dr Sydenham) as to be constant only  
 in inconstancy. A disposition to weep and  
 laugh upon the most trifling occasions belongs  
 to the hysterical ~~condition~~ <sup>predisposition</sup>. It is because  
 of the hysterical ~~condition~~ <sup>predisposition</sup> that they weep more readily &  
 children and old people possess so much of this  
 predisposition that they weep more readily &  
 easily than persons in adult life. A disposition

-cr  
con  
of

to laugh ~~is equally~~ upon occasions that ~~ought~~  
 not to excite laughter belongs likewise to  
 this ~~local~~ predisposition. ~~This property~~ It is  
 so deep<sup>ly</sup> seated in some people as to elude the  
 command of their wills, and to appear in  
 places that do not accord with it. The Rev.  
 Mr. Duke formerly an eloquent & popular pre-  
 -acher in this city was so forcibly affected  
 with this predisposition in the last years of his  
 life, that he laughed at every thing he said  
 or did. Even in middle life his wife informed  
 me he was often obliged to pinch himself  
 severely in the pulpit, in order to prevent  
 his laughing at some trifling <sup>or idea</sup> object that oc-  
 -curred to his eyes or his imagination.

¶ I have said this disease rarely affects the blood  
 -vessels. When it does, which is sometimes the  
 case in its paroxysms, it ~~is~~ a suspension  
 of the faculties of the mind takes place in a transient  
 bit of derangement.

of ~~the~~ the hysterical symptoms generally follows. This translation of the disease to the blood vessels may be known by the pulse. Dr Whist mentions a case of this kind in a lady of 30 years of age who was affected with hysteria in whom the disease ceased as soon as her pulse became full & active. This change in her pulse was induced by a translation of ~~her~~ excitement <sup>to the blood vessels of the brain,</sup> for she became at the same time <sup>delirious</sup> ~~insane~~. In mania <sup>preceded by</sup> the symptoms of hysteria <sup>most</sup> ~~which~~ & sometimes all its symptoms cease ~~at~~ with the coming on of that disease of the brain, and it is unashable the hysteria often returns with the cessation of mania. While I thus confine hysteria to the nervous muscular & alimentary systems I beg you

✓ here between a fullness, and a convulsive  
action or force in the blood vessels. The former  
often exists with all the symptoms of Hypo-  
-teria. It has been called by Dr Cullen  
lyssiteria pathetica.

would collect that it sometimes blends  
itself with all the other Systems in the  
body. In a paroxysm of Hysteria every fibre  
of every System in the body is brought  
into convulsive Sympathy with the nervous  
muscular & alimentary Systems, and even  
in cases of every kind, we sometimes meet  
with a disheveling & perplexing mixture  
of hysterical Symptoms. You will distinguish

7 The Hysteria is sometimes suspended by  
the coming on of a carine appetite <sup>for food,</sup> ~~no~~  
~~less than~~ <sup>less than</sup> by the coming on of madness, &  
from the same cause - that is the Absorption  
or attraction of the disease from its ordinary  
Seats to the stomach.

8 It is distinguished from Epilepsy <sup>by not</sup> ~~but in~~  
affecting the blood vessels, and by its paroxysms  
rarely affecting the <sup>regular</sup> ~~understanding~~ exercises

V ~~in the system~~<sup>only</sup> ~~derived~~<sup>chiefly</sup> from  
the nerves which issue from the medulla  
spinalis instead of the brain, it might  
be called ~~Spinal~~ ~~Spinal~~ ~~Spinal~~

7 M In being induced by corporeal as well as  
mental causes. Hippochondriasis is  
induced chiefly, or perhaps only by mental  
causes.

4  
of the mind. In short it is Epilepsy in all the systems  
except the blood vessels, ~~from the convulsions~~ ✓  
9 It is distinguished from Hypochondriasis  
or Tristitia

1 By depending upon mobility of the nervous sys-  
tem, that is <sup>a mixture of</sup> ~~more~~ cause of sensibility & irrita-  
-bility. Hypochondriasis depends upon torpor  
or stupor, and sometimes upon a mixture  
of both in the nervous system.

2 By affecting men more than women.

3 By the Absence of the Globus hystericus &  
Dyspepsia.

5 By being worse in warm weather, & most  
common in warm climates. & that rarely.

6 By being attended only with transient alienation of mind  
✓ I have followed the neurologists in believing  
these diagnostic marks of these two diseases of  
the nervous system, but take notice, they  
often blend their symptoms with each other,  
& they even & then alternate with each other.  
Hysteria sometimes moreover precedes, and

V There is some cases of hysteria a constant  
Spice of hypochondriac gloom, and in others  
a constant Spice of levity, ~~with~~ which dis-  
-poses itself in the body and mind being  
always poised for either or a fit of laughter.

it  
aggravates <sup>8</sup> succeeds Thypochondriasis. One more

The remote Causes of Hysteria are corporeal & mental. The former are obstructions of the menses, or an inordinate flow of them - fluxus <sup>an acid humor of any kind,</sup> <sup>worms &</sup> albus, - obstructed viscera, - strong drink, strong tea. It is from the general use of the two last of those causes that it prevails as much in Kitchens and in humble life, as in ~~the~~ <sup>the</sup> Chambers of the ~~for~~ higher ranks of Society. Its mental Causes are anger, meanness, envy, jealousy, and strong venereal desires.

Its exciting Causes are the sudden operation of ~~any of~~ its remote Causes, and in addition to them - offensive smells, impure air, fatigue, and the sudden emotions of terror, joy, and surprise.

The Hysteria is seldom a fatal disease in its simple state, but from its frequent visits, and to other Systems ~~it~~ and particularly to the Viscera, it often brings on other diseases which terminate in death.

For a <sup>more</sup> complete history of one of its paroxysms  
 and of its chronic symptoms I refer you to  
 the writings of Dr Sydenham, Drullen, and  
 Sir Richard Blackmore. I shall give you a  
 summary of one in order the better to enable  
 you to understand the theory of the disease

The symptoms of a paroxysm of Hysteria  
 are a rumbling noise in the belly, a sense of  
 a globe ascending from the abdomen to the  
 stomach and fauces, accompanied with a  
 sense of strangulation - a cold sensation upon  
 the crown of the head called Clavus hystericus,  
 - a like sensation of cold along the back -  
 laughing, screaming, sobbing, crying,  
 convulsive motions of the limbs, or of the  
 whole body, <sup>titanus</sup> pale urine, - stupor, <sup>syncope</sup> ~~from~~  
 apparent asphyxia in which state the

.

patient sometimes lies for 10 or 15 minutes and then and then longer, and from which she emerges with crying, sobbing, convulsions in the limbs, clinched hands and teeth, & finally with a deep groan succeeded by silence which closes the paroxysm.

Sometimes a paroxysm of Hysteria comes on with an exquisite pain in the head, back, stomach and bowels which extends after a while to the limbs, where it produces <sup>an</sup> ~~exquisite~~ hysterical Rheumatism which continues after the cessation of the fit for several days or weeks. ~~It~~ <sup>It</sup> differs from common Rheumatism by affecting the skin, membranes & muscles only and never the joints, or ligaments.

Again - a paroxysm sometimes comes on with convulsions resembling Epilepsy, & a sudden swelling of the belly from which Wind issues upwards & downwards with

a great voice. These symptoms are preceded  
by more or less of the symptoms before descri-  
bed. —

The symptoms of a Chronic Hysteria,  
or of imperfect intermissions are head ach, ver-  
tigo, flatulency, colic, Colera morbus, cough,  
dyspnoea, palpitation of the heart, Ischuria,  
Lumbago, Rheumatism, coldness of the feet,  
crown of the head and back; Swellings of the  
face, <sup>throat &</sup> ~~base~~ legs ~~and~~ resembling dropsy, but  
differing from them in being transient, &  
in ~~going down~~ <sup>being most obvious</sup> ~~appearing most~~ in the morn-  
-ing instead of the evening - a salivation,  
numbness of the limbs, <sup>& sometimes</sup> palsy, <sup>and</sup> apoplexy, Epi-

All these symptoms are more or  
less painful & distressing according to the  
greater, or less degree in which the  
Hysteria invades other systems, besides

✓ ~~4 The Hysteria appears in a chronic form without paroxysms.~~

~~5 It appears in paroxysms, but with a perfect freedom from all its symptoms in its intervals. The paroxysms in this case are more severe than when they are followed by the chronic form of the disease.~~

the nerves, and particularly the blood vessels.  
 All these diseases differ from diseases of the  
 same name only by making a more  
 full impression upon the parts in which they  
 are seated. They resemble <sup>paintings with</sup> ~~plain pictures~~  
 water colors instead of oil. <sup>It is only when</sup> ~~it is only when~~  
 they extend to the blood vessels & substance of  
 the viscera, they ~~are~~ may be said to be  
~~fixed~~ fixed with oil colors upon the  
 system.

I said formerly in treating upon the  
 nervous system, that sympathies were more  
 prompt and extensive between the different  
 parts of the nerves, than any other of the sym-  
 -toms of the body. This accounts for the great  
 -<sup>variety of</sup> ~~the~~ commonness in them when they are  
 diseased. They have been compared to the  
 agitations of the ocean of the East wind.

~~Diseases which terminate in death. The diseases thus find <sup>the same nature</sup> need portents of all ~~the properties~~ as if they had been brought on by other causes, and require the same treatment.~~

The Remedies for this disease divide themselves into two parts.

I such as are proper in its paroxysms, & It such as are proper in its intervals, or when it exists without paroxysms.

To the 1<sup>st</sup> head belong

1. Bleeding when the pulse is full, or when there is reason to believe the system is plethoric. This is generally the case when it occurs in women in whom the menses have been recently obstructed, and in ~~poor~~ women of good appetites. It is the more necessary if the brain and reason be affected.

2 The pilularium. 3 garlic or mustard to the

v  
m  
h

feet.

4 Stimulating and opening injections. A solution of Apapetida in water, also Liquid Camphur are in some cases useful additions to them.

5 As a great deal of the pain of a patient arises from air vent up in the bowels, it should be discharged by fixing a glass tube in the anus. Such is the force of the <sup>force of the</sup> retrograde motion of the intestines, that the Spincter ani has been known to snap off the pipe, and to draw it several inches up the bowels.

6 Stimulating Odors applied to the nose such as Spirit of hartshorn, burnt feathers, and Apapetida. A physician in New England after having tried the above odors to no purpose, pulled off his boot, and applied his <sup>toe</sup> ~~foot~~ smocking with the <sup>feet</sup> ~~foot~~ sweat of his feet to the nose of his patient. He immediately recovered. The

A

more common odors had probably lost their effects from habit.

If all these remedies should fail, and the Disease should assume as it sometimes does the form of asphyxia

7 Cold water should be thrown upon the face, or dropped upon the upper lip, and  
 8 the Soles of the feet, and nostrils should be tickled. These gentle Stimuli often do service, after more powerful ones have been used to no purpose.

9 Liquid Laudanum combined with the Tincture of Opapetida should be given as soon as the patient is able to swallow. Cloves & Water have been found useful in discharging Wind from the Stomach.

II The Remedies proper to be administered in the intervals of the Disease should be regulated

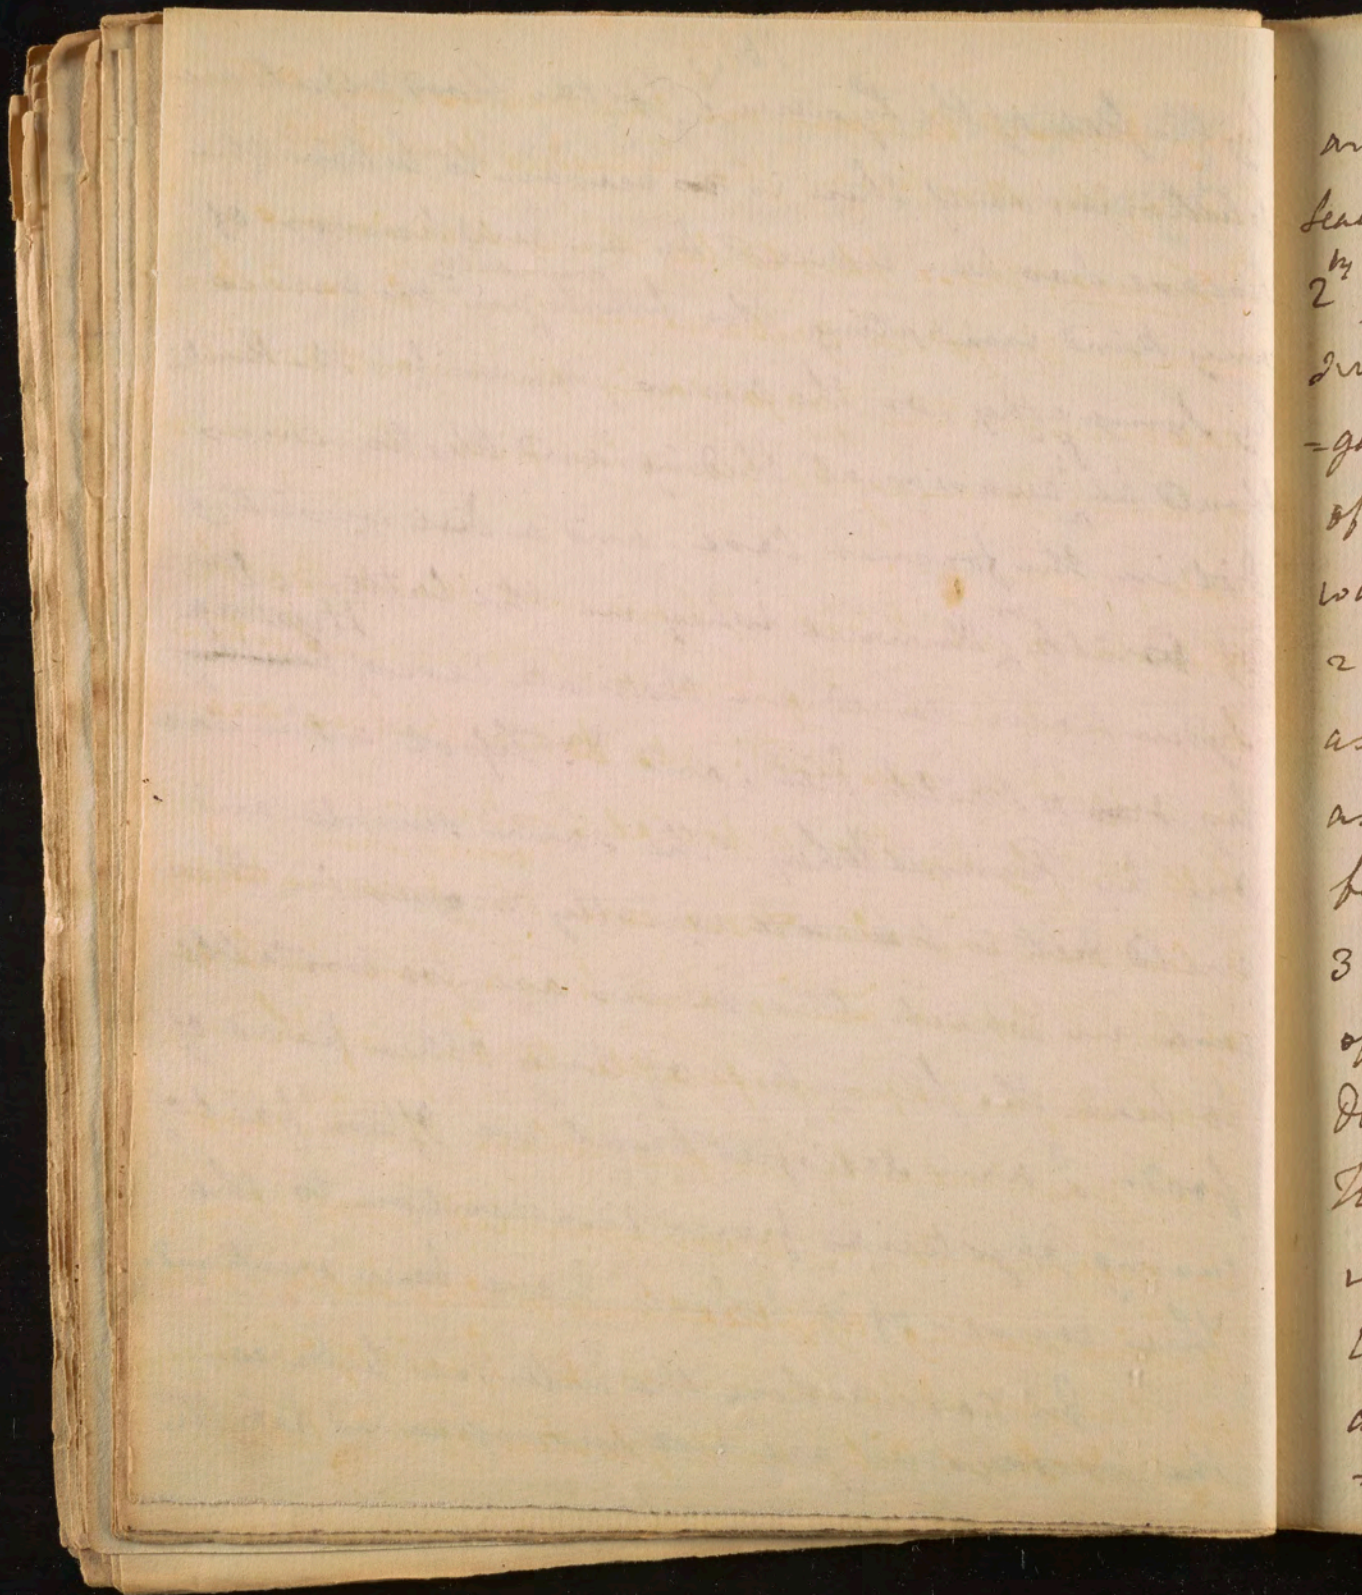

V It will be highly proper to begin the  
cure by the removal of all its remote &  
existing causes. -

by the state of the system. If the blood vessels are  
 plithoric, or if there is ~~no~~ reason to believe the  
 disease has been induced by an acrid humor of  
 any kind irritating the bowels <sup>primarily,</sup> and the nerves  
 by sympathy, or the nerves <sup>primarily,</sup> the Remedy  
 should be <sup>p</sup> occasional bleeding, and Absterious  
 Diet in the former case, and a diet consisting  
 of ~~Barley~~ <sup>or</sup> Runnet Whey in the latter. Dr  
 Sydenham cured an obstinate case of <sup>Hysteria</sup> ~~Barley~~  
 by ~~Barley~~ a milk diet, and Dr. Tissot a similar  
 one by Runnet Whey. The same simple and  
 mild diet is ~~likewise~~ equally proper in those  
 cases in which the nerves are too irritable  
 to bear the stimulus of any other kind of  
 food. I am satisfied that we often fail of  
 curing Hysteria from inattention to the  
 three causes of it which have been mentioned.

In cases where the intervals between  
 the paroxysms are not accompanied with

De  
Th  
L  
L  
a  
-

any disordered Actions in the Nerves, and other  
 Seats of the Spasmodica, the Remedies should be  
 2<sup>d</sup> Tonics. These should be the Cordial gums,  
 such as Apafotida, galbanum, myrrh, and Lac-  
 -gasperum. The Apafotida is the most active  
 of them. It may be given in pills, tincture or  
 watery infusion.

2 Bitters of all kinds. I have not found Bark  
 as useful in giving tone to the nervous System  
 as might be expected. Its tonic Virtues are  
 felt chiefly by the Arterial System.

3 Certain metals. These are the <sup>common</sup> preparations  
 of Iron, Copper Zinc and Lead. Iron in large  
 Doses is perhaps preferable to any of them.  
 It is particularly useful when the Disease  
 is occasioned, or accompanied with Worms.

4 Stimulating applications to the belly, such  
 as the Volatile Liniment, Spirit of Turpen-  
 -tine & Sweet Oil, and plasters of Apafotida,

v same Applications to the Spine.

Gallanina, and Burgundy pitch, also the  
 5 Bandages bound tight around the belly &  
 limbs. They give tone to the muscular system.  
 I have twice known them used with great  
 Advantage. They were first suggested by Verr-  
 -swriter.

6 a cordial Diet consisting chiefly of salted meat,  
 with vegetables, and a moderate quantity of  
 white wine or port. The low & acid wines  
 and acids of all kinds should be avoided.  
 They all tend to destroy the <sup>natural</sup> ~~possibility~~ <sup>contracte-</sup>  
~~to induce a morbid~~ <sup>stability</sup> of the nervous system,  
 and to induce in it a morbid irritability.

7 Exercise especially on horseback & labor. The  
 latter is a radical remedy in this disease. Hun-  
 -dreds of warriors who have been compelled  
 to labour in consequence of being reduced in  
 their circumstances have been cured by it.

✓ Lady Rachel Russet was cured of an hypo:  
-tical head ache of long standing by the  
grace which followed the execution of her  
much beloved husband Lord W<sup>m</sup> Russet.

Remember in the use of all these remedies to  
 attend frequently to the pulse. all the above  
 tonic remedies will be hurtful ~~except~~ <sup>unless</sup> they  
 are given in a ~~reduced~~ <sup>states</sup> state of the arterial  
 system, or in ~~other~~ <sup>other</sup> words when the nerves  
 & blood vessels are <sup>not</sup> ~~plumbed~~ with each other.  
 When the pulse from any cause becomes  
 excited, <sup>and the patient feverish,</sup> leave off your tonics until by bleeding  
 or purges or low diet you have reduced it  
 then to a pair of excitement with the nerves.  
 & the excitement of some steady passion. I have  
 often cured Hysteria. I have several times  
 known it cured by the death of a child in an  
 hysterical mother. Dr Cullen used to tell his pupils  
 that the Hysteria was scarcely known in Scotland  
 during the Rebellion in the year 1745 for  
 during that time every woman in the

9 tone to the nervous system. A Diary, a garden, a kitchen, a nursery, a domestic manufactory or care of any kind ~~of any kind~~ are all powerful remedies for this disease. A lady in this city who was much afflicted with hysteria from the want of employment, once asked a sensible female friend, "What she should do to get rid of all her diseases and distempers"? "Go (said she) and fall down upon your knees ask the Almighty to for some real trouble, and that will cure you of all your imaginary diseases and distempers".

9 A change of climate. A cold climate should be preferred to a warm one.

10 Enabimurary if our patient be single.

I am aware this remedy is forbidden by Dr. Sydenham, Sydenham, and Mandeville, but it must have been in women ~~too~~ debilitated ~~to~~

below the power of that, or perhaps any other  
remedy. I have known it produce the most  
salutary effects, and more especially where it  
has been followed by Childbearing. ~~In the case~~  
~~of this function~~ This will easily be  
understood when you recollect how much the  
Arterial disease of pregnancy attracts mor-  
bid excitement from the nervous system.  
Few women who bear children are ever  
troubled with this Disease.

A long and faithful <sup>for months & years,</sup> perseverance in  
the use of all the Remedies that have been men-  
tioned is indispensably necessary to cure the  
Dysuria. In short our business is not  
so much to cure a disease, as to change  
the constitution by removing its predispo-  
sition to it. It is in this way it is some-  
times cured by time without the aid

80 medicine of any kind, but it much oftener  
 ends in Hypochondriasis by the nerves wear-  
 -ing themselves down from a laxum to  
 a Strictum state. Sometimes it terminates in  
 organic diseases such as palsy, Apoplexy, Epilep-  
 -sy, <sup>which it only counteracts for a while,</sup> ~~Hydrocephalus internus,~~ <sup>Hepaticula</sup>  
 Dropsy. ~~When~~ It is common to apply the  
 epithet hysterical to these diseases, but  
 this is improper, for no sooner ~~do~~ do they  
 make their appearance than the hysteria  
 generally ceases. It should be considered as  
 the remote Cause only of all those organic  
 diseases, and they should all be treated as if  
 they had originated from more ordinary  
 Causes.
